Fairfield, NJ - July 28, 2021 -- AZCO Corp. provides systems that enable you to start making your own test strips or improve your current test strip making process. Flexibility and speed are constantly being rewarded, and now AZCO Corp. can help you meet the demands. Available options include unwinds and rewinds, lamination, coating and drying, and a cut-to-length module. All systems can be customized to meet your specific needs.

Manufacture your own test strips from raw material with AZCO's multi-station reel-to-reel laminator system with cut-to-length knife assembly. Rolls of material are laminated onto a base material, and then strips are cut to a set length. Included is an unwind and rewind system, lamination station, print area, and cut to length module.

Another product option for making your own test strips is a membrane coating and drying station.

One or multiple rolls of material are unwound, travel through an adjustable marking system, and then serpentine through a solution bath. The material is then dried by a forced hot air system and rewind onto a motorized rewind.

AZCO Corp. is an ISO 9001:2015 certified company with over 35 years of experience developing solutions for a wide range of feeding and cutting applications. Made in USA.
