## Test strip cutter

By [Kari Embree \(https://plus.google.com/100576262519768633809?rel=author\)](https://plus.google.com/100576262519768633809?rel=author) in [Automation \(/automation\)](#) on December 15, 2013

The test strip cutter allows original format of diagnostic test sheets to be cut into individual strips. Feed the diagnostic sheet or card into the unit, and it will automatically cut to size, reducing waste and tooling cost. The machine operates at a high-cycle rate, and the system consists of two cutting stations that have rotary shear cut blades driven by digital motors. The shear cut blades provide clean cuts and long life. An optic eye registration sensor allows for +/- .006" accuracy at a rate of 1000 strips per minute. Every function can be controlled through the touch screen and remote support is available, anywhere in the world.
